

# ESL<sup>®</sup> Pump Packing

Innovative Pump Packing System That Increases Product Life Span

Whether your pump packing needs involve frac pumps, mud pumps, or other high-pressure plunger pumps, H&D's proprietary Extended Service Life Pump Packing (ESL<sup>®</sup> Pump Packing) will extend your product lifetime and improve cost efficiency.

# ESL Pump Packing

## Designed to Outperform & Outlast the Competition

Our team of engineers spent countless hours in R&D designing a ground-breaking pump packing system that has a proven longer life span, state-of-the-art material blend, and proprietary construction that reduces failure risk. The result is an innovative packing solution designed to outperform the competition.

## Features & Benefits

- Proprietary header ring reduces erosion, maintains low pressure seal integrity, and keeps pressure rings energized and packing stationary within stuffing box
- Internally lubricated materials significantly reduce coefficient of friction, resulting in lower operating temperatures and enhanced efficiency
- Alternate construction methodology eliminates layer separation as a potential cause of failure

## Elastomers

- NBR (Nitrile, Buna-N)
- HNBR (HSN)
- FKM (Viton®)
- PTFE (Teflon®)
- PEEK
- Urethane

## Applications

- Frac pumps
- Mud pumps
- Plunger pumps

## Fabrics

- Cotton
- Synthetic (Nylon®)
- Aramid (Kevlar®)

## CONTACT US

Let us help you find the right pump packing solution  
for your application, the first time.
